Our Process

Artificial Intelligence(AI)

Artificial Intelligence (AI, also Machine Intelligence, MI) is intelligence demonstrated by machines in contrast to the Natural Intelligence (NI) displayed by humans and other animals.

DURATION: 40+ HOURS

WHAT YOU NEED TO KNOW

- Complete knowledge on Python
- Complete knowledge on Data Science
- Complete knowledge on Deep Learning
- Mathematics Background (Optional)

Why Artificial Intelligence

AI automates repetitive learning and discovery through data. It adds intelligence to existing products and adapts through progressive learning algorithms. AI analyses more and deeper data using neural networks that have many hidden layers. It achieves incredible accuracy through deep neural networks.

Project 1: CHATBOTS

Ever seen that when you ask questions at a chatting portal, automatic reply comes? Even messengers like Facebook Chat, Google Chat etc. have these features. You can even write questions and assistants like Siri, Alexa, Google, respond automatically and perfectly. Well, they are called 'Chatbots'. Now that we know their features, why not make our own chat bot system. How? We'll help you make one.

Project 2: OBJECT DETECTION

Is traffic giving you nuisance? Are you really getting late to office, or your date? Well, the best solution is to provide one, than to expect one. Use Deep Learning and OpenCV to tackle this biggest problem. Learn object detection algorithms and their applications.
